Unlike hearing aids, Cochlear Baha Bone Conduction Systems are covered by many insurance plans and typically Medicaid. Contact your insurance plan or local Hearing Implant Specialist to determine eligibility.
The Baha Softband and SoundArc wearing options

If your child is too young (under the age of five) or is not yet ready for a surgical implant, they can still experience the joy of better hearing with the Baha Softband or SoundArc. Both devices are designed to provide children with the hearing performance and amplification they need to facilitate language development on par with their hearing peers, without the need for surgery.  

As your child grows, it’s natural to progress from a non-surgical solution to an implantable solution. An implant improves the transmission of sound and ensures children can benefit from consistent and reliable access to hearing.

Softband
The Baha Softband is a comfortable and easy-to-wear headband designed specifically for babies and toddlers under the age of two. Unlike other headbands, the Softband uses the Baha SoftWear Pad, which reduces peak pressure to give greater comfort and increase the level of sound thattransmits to your child’s ear.

SoundArc
The Baha SoundArc is ideal for children approaching the age of implantation, offering slightly older children a different wearing option. It has a modern look that kids will love. It’s lightweight, practical and, like a pair of sunglasses, easy to put on and take off. It fits securely and comfortably in place, so it is great for active kids.

To determine if one of these solutions is right for your child, schedule an appointment with a Hearing Implant Specialist to start the discussion and request that your child try the Baha Softband or SoundArc.
